## **For Immediate Release**

Toledo, Ohio, September 27, 2007

### **Xunlight Corporation Receives \$2 Million Award from National Institute of Standards and Technology's Advanced Technology Program**

Xunlight Corporation, formerly MWOE Solar, Inc., received a \$1,991,000 award from National Institute of Standards and Technology (NIST) under the agency's Advanced Technology Program (ATP). This award allows Xunlight to develop, in collaboration with the University of Toledo (UT) and National Renewable Energy Laboratory (NREL), a novel hybrid chemical vapor deposition process for the roll-to-roll fabrication of high-efficiency thin film silicon solar cells at ultrahigh rates up to 100 angstroms per second.

"While we are building a high-speed manufacturing plant today to produce flexible and lightweight thin film silicon photovoltaic modules using our advanced technologies, the prestigious ATP award will allow us to accelerate the development of our next generation manufacturing technologies at Xunlight," said Dr. Xunming Deng, President and CEO and also the Principal Investigator of the project.

A project brief is available at NIST web site at:  
<http://jazz.nist.gov/atpcf/prjbriefs/prjbrief.cfm?ProjectNumber=00-00-7507>.

As previously announced, Xunlight moved into its new corporate headquarters, a 122,000 facility located at 3145 Nebraska Ave, Toledo, Ohio.

#### **About Xunlight Corporation**

Xunlight Corporation, a University of Toledo technology spin-off, is a global manufacturer of flexible and lightweight power modules that convert sunlight into electricity. The Company produces, using its proprietary high-speed and low-cost manufacturing process, efficient and value-added thin-film silicon solar panels for building integrated and other applications and markets these products worldwide.
